

Courion and Identropy Deliver On-Premise Managed Services to Optimize Identity and Access Management Benefits

2008-02-14 16:08:22 -

www.courion.com - Courion Corporation Rachel Weeks, 508-661-0467 rweeks@courion.com or fama PR Liz Campbell, 617-758-4149 courion@famapr.com Courion(R) Corporation, the provisioning experts for results-driven operations, and Identropy, an Identity Management platform delivery company, today announced the availability of the Identropy Managed Identity Services (iMIS) for Courion's Enterprise Provisioning Suite(TM) solution. iMIS is a management tool that enables companies that host their own Identity Management systems to outsource the monitoring, management, reporting and remediation of the infrastructure to Identropy.

Unlike some traditional managed identity services offerings, iMIS for Courion's Enterprise Provisioning Suite is a flexible, on-premise solution that does not require companies to outsource their entire Identity Management infrastructure. Instead, with Identropy acting as an extension of existing engineering resources, Courion customers maintain control over their own workflows and can simply shift day-to-day system management and monitoring to Identropy leveraging the web-based iMIS Portal Dashboard in order to improve productivity and focus on other security and compliance priorities.

"Courion provides measurable benefits related to automating user provisioning, role management, access compliance and password management processes," said Kurt Johnson, vice president of corporate development, Courion. "Through our strong partnership with Identropy, organizations can enhance their own resources with cost-effective expertise to properly manage and administer Courion's products and monitor related technology and infrastructure. This helps ensure customers' ability to maximize the benefits of the solution while enabling us to offer access to a flexible, cost-effective managed service solution that fits with their business and operational priorities without requiring them to cede too much control."

iMIS provides Courion customers with increased transparency into the health of their Identity Management infrastructures through the iMIS Portal Dashboard. An important element of the Identropy managed service, the iMIS Portal Dashboard provides access to error alert messaging, approvals-based remediation, workflow functional status and weekly reports reflecting who has accessed their Identity Management administration consoles.

"With solutions like iMIS that don't require a completely outsourced Identity Management infrastructure, we are addressing a major gap in the managed identity services space. The flexibility of Courion's Enterprise Provisioning Suite lends itself well to managed service offerings, allowing us to easily integrate with the system to become a seamless extension of customers' engineering staff," said Victor Barris, CEO, Identropy. "Managing alerts through the iMIS Portal Dashboard, Courion customers can opt to solve system issues on their own, or ask Identropy for help. This flexibility allows us to implement system patches or upgrades, while supporting customers' overall audit and compliance reporting responsibilities."

Courion and Identropy will host an Identity Management Seminar on Tuesday, February 19, 2008, from 8:30--11:00 a.m. at the Bethesda Terrace Conference Room on the Sixth Floor in the Microsoft Offices, 1290 Avenue of the Americas, New York City. At the event, users will learn strategies for achieving operational efficiencies through Identity and Access Management-driven solutions. Registration is available online through the Courion website, www.courion.com/company/events.
